# Patterning With Tru-Grid<sup>™</sup>

## Q: How do I use Tru-Grid<sup>™</sup>?

**A:** When using a Pellon Projects<sup>™</sup> pattern, print the scaled pattern from [www.PellonProjects.com](http://www.PellonProjects.com) for your reference. If you are scaling up your own design, it will be necessary to draw a grid on the original reference design to follow.

Copy the design from the smaller grid to the larger grid by filling each square in the grid in the same way as the original. Don't try to sketch the entire pattern at one time. Instead, look for the key points. It may be necessary to count squares in each grid to see where to begin, but it is not difficult to do. Use a pencil so that you can erase, if necessary. When you are satisfied with your drawing, go over the lines to darken them.
